

Netflix-Clone

This is a frontend clone of Netflix website built using Html, CSS and JavaScript. It's not a replica of original Netflix website, and it doesn't have all the features. It's a similar version of Netflix with my own design touch, showing my abilities in Html/CSS and JavaScript to build something advanced like Netflix. It contains the home page or the landing page, sign-in page, sign-up page, browse page, and movie player.

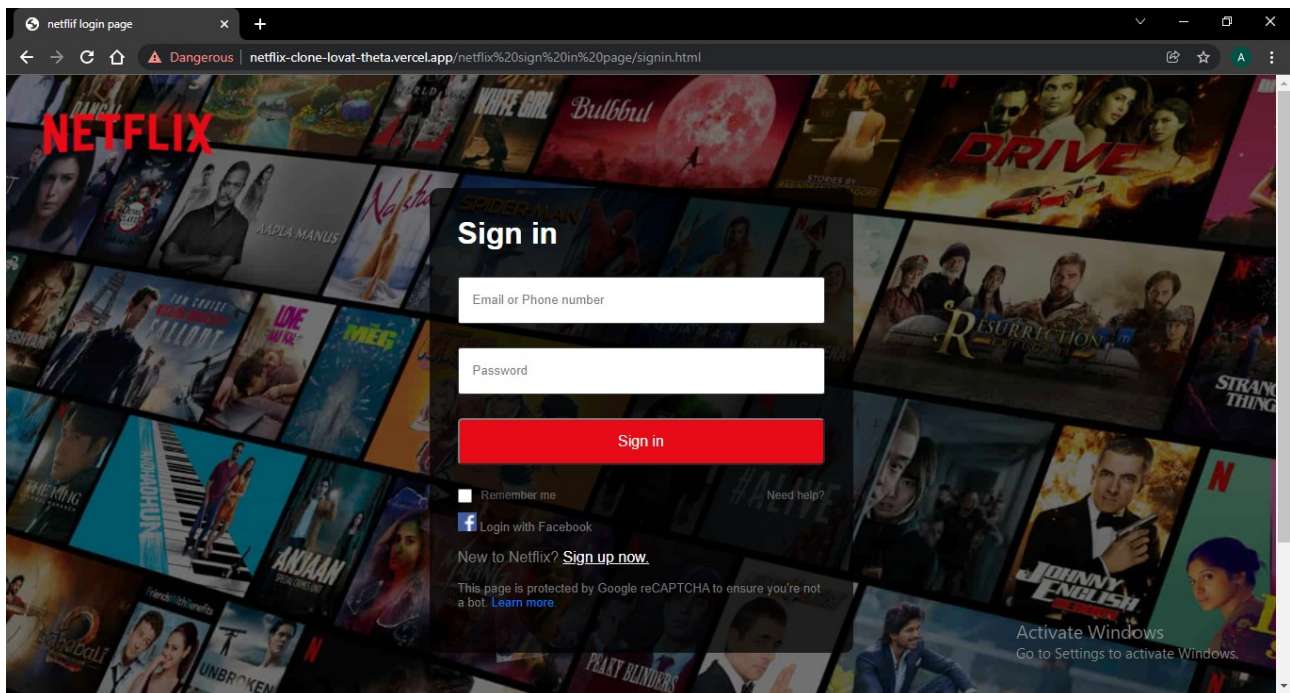

Landing Page:

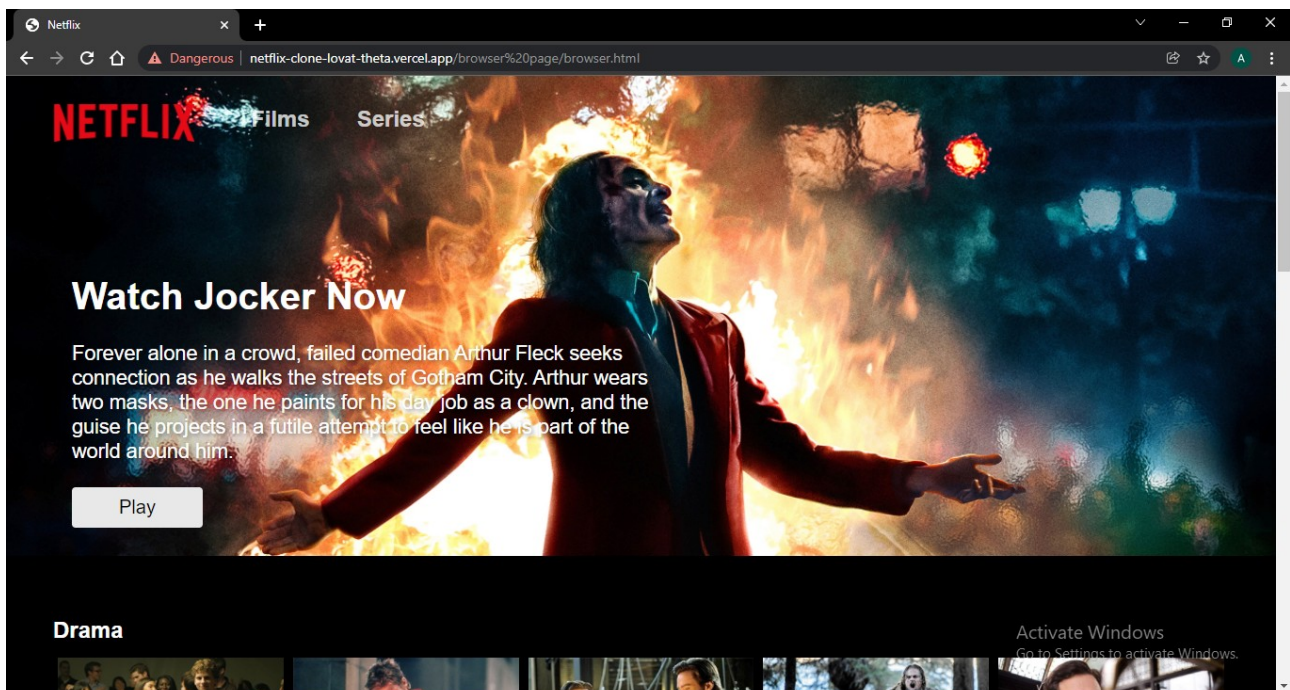

Sign-Up Page:

Sign-In Page:

Browse Page:

Tech-Stack Used:

- HTML: Used the html to build the structure of each page
- CSS: Used it to design the page so as to give it a like look and feel of Netflix by using different design elements.
- JavaScript: Used it to give each webpage a responsive nature to different events (like clicks and on provided input)
- Visual Studio Code: Used to build, write and deploy my project locally.

Approach:

My approach in building each page of this project was simple first I created basic structure of webpage using html then designed the page using CSS elements then if required used JavaScript to make the webpage responsive to clicks or on provided input. The sequence of development of different pages of this project are

- 1) Landing page
- 2) Home page
- 3) Sign-in page and Sign-up page
- 4) Browse page
